

Richmont Monaco

release four revolutionary skincare, home-use devices.

They say at Richmont: 'Technology is power. So is beauty'. And the latest Richmont innovations certainly aim to empower their customers, giving them the possibility to experience the beauty institute's skincare every day, from the comfort of their home.

Dermaroll, Glowshield, Lightech and Trionix. These remarkable developments were created after years of research, involving world-renowned scientists, doctors and biologists, all experts in skincare technology. Using cutting-edge treatments like microcurrent technology, LED phototherapy with different wavelengths or 3D smart brushing that follows the skin's contours, each one of the

four devices is dedicated to treating a specific need: rejuvenating and replenishing the skin; repairing it from acne or wrinkles and other signs of ageing; or reducing imperfections like pigmentation, blemishes or cellulite. Of course, these are noninvasive and pain-free treatments; but what makes them unique, and probably a first in the skincare market, is that they can be used at home and be part of a daily beauty routine, helping to achieve faster and longer-lasting benefits.

The cherry on the cake: their glamorous (and award-winning) design makes them perfect as ornamental objects in any part of the house.
